1.1 Measure Structure

Single Measure

1.3 Electronic Clinical Quality Measure (eCQM)

No

1.6 Measure Description

This measure updates CMS' MDS 2.0 QM on bowel and bladder control. It is based on data from Minimum Data Set (MDS) 3.0 assessments of low risk long-stay nursing facility residents (those whose cumulative days in the facility is greater than 100 days). This measure reports the percent of long-stay residents with a selected target assessment who are frequently or always bladder or bowel incontinent as indicated on the target MDS assessment (OBRA, PPS or discharge) during the selected quarter (3-month period).

1.7 Measure Type

Outcome

1.8 Level of Analysis

Facility

1.9 Care Setting

Post-Acute Care

1.14 Numerator

The numerator is the number of long-stay residents with a selected target assessment who are frequently or always incontinent of bowel or bladder.

1.15 Denominator

The denominator is all long-stay residents in the nursing facility with a target assessment (OBRA, PPS or discharge) except those with exclusions.

1.20 Types of Data Sources

Electronic Health Records: Electronic Health Records

6.1.2 Current or Planned Use(s)

Public Reporting, Quality Improvement (Internal to the specific organization)

6.1.3 Current Use(s)

Public Reporting, Quality Improvement (Internal to the specific organization)

Exclusions

A resident is excluded from the denominator if the selected MDS 3.0 assessment was conducted within 14 days of admission (A0310A = 01) or if there is missing data in the response fields for the relevant questions in the MDS. Other exclusions include residents with severe cognitive impairment, total dependence in mobility, comatose, or with an indwelling catheter.

Nursing facilities are excluded from public reporting if their samples include fewer than 30 residents.

Planned Use

Public Reporting, Quality Improvement (Internal to the specific organization)

Risk Adjustment

No risk adjustment or risk stratification

Target Population

Elderly
