1.0 New or Maintenance

Maintenance

1.1 Measure Structure

Single Measure

1.3 Electronic Clinical Quality Measure (eCQM)

No

1.6 Measure Description

Change in rasch derived values of motor function from admission to discharge among adult inpatient rehabilitation facility patients aged 18 years and older who were discharged alive. The timeframe for the measure is 12 months. The measure includes the following 12 FIM® items: Feeding, Grooming, Dressing Upper Body, Dressing Lower Body, Toileting, Bowel, Expression, Memory, Transfer Bed/Chair/Wheelchair, Transfer Toilet, Locomotion and Stairs.

1.7 Measure Type

Outcome

1.8 Level of Analysis

Facility

1.9 Care Setting

Home Care, Inpatient/Hospital, Post-Acute Care

1.14 Numerator

Average change in rasch derived motor functional score from admission to discharge at the facility level. Average is calculated as (sum of change at the patient level/total number of patients). Cases aged less than 18 years at admission to the IRF or patients who died within the IRF are excluded.

1.15 Denominator

Facility adjusted expected change in rasch derived values, adjusted at the Case Mix Group level.

1.20 Types of Data Sources

Claims Data, Other

6.1.2 Current or Planned Use(s)

Payment Program, Public Reporting, Quality Improvement (Internal to the specific organization), Quality Improvement with Benchmarking (external benchmarking to multiple organizations), Regulatory and Accreditation Programs

6.1.3 Current Use(s)

Payment Program, Public Reporting, Quality Improvement (Internal to the specific organization), Quality Improvement with Benchmarking (external benchmarking to multiple organizations), Regulatory and Accreditation Programs

Exclusions

National values used in the CMG-adjustment procedure will not include cases who died in the IRF (or other venue) or cases less than 18 years old. Cases who died during rehabilitation are not typical patients and are typically omitted in the literature when looking at rehabilitation outcomes. In addition, the FIM instrument is meant for an adult population (Ottenbacher et al. 1996).

Planned Use

Public Reporting, Quality Improvement (Internal to the specific organization)

Risk Adjustment

Stratification by risk category/subgroup

Target Population

Dual eligible beneficiaries, Individuals with multiple chronic conditions
