1.0 New or Maintenance

New

1.1 Measure Structure

Single Measure

1.6 Measure Description

The Delay in Progression of CKD Measure is an outcome measure to assess how well providers delay progression from Stage 4 CKD to end-stage renal disease (ESRD) requiring chronic dialysis.

1.7 Measure Type

Outcome

1.8 Level of Analysis

Clinician: Group/Practice

1.14 Numerator

The measure outcome is progression from Stage 4 CKD to ESRD requiring chronic dialysis in the measurement year for patients aged 19 and older with stage 4 CKD. The outcome of interest is defined as enrollment in ESRD or ESRD-Dialysis Medicare coverage. Not all possible patient events will be counted in the numerator.

1.15 Denominator

The cohort includes Medicare Fee-For-Service beneficiaries (patients) who are 19 years and older, with Stage 4 CKD, who are not enrolled in Medicare ESRD or ESRD-dialysis, who are not enrolled in Medicare hospice, who have not had a kidney transplant within the past 12 months, and who are being treated by a nephrology practice.

1.20 Types of Data Sources

Claims Data

6.1.2 Current or Planned Use(s)

Payment Program, Quality Improvement with Benchmarking (external benchmarking to multiple organizations)

6.1.3 Current Use(s)

Not in use

Exclusions

The cohort excludes patients with advanced or metastatic cancer, defined as specific cancer-related ICD-10 codes from an inpatient encounter.

Risk Adjustment
