

NQF Feasibility Assessment Report

Measure Number: 3185

Measure Title: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention

A 2016 feasibility assessment was performed, in order to assess the extent to which the required data are readily available and can be accurately captured in a standardized way, without undue burden.

Two entities participated in the feasibility assessment for this measure:

- One participating entity is a 619-bed multispecialty academic medical center, serving 33 counties, in the state of California.
- The second participating entity is a 200- bed acute care facility, serving the City of Chicago Cook County, in the state of IL.

Feasibility Assessment Results

The required data elements are currently captured in the Electronic Health Record. A few encounter types are not coded in some systems. Measure exceptions and measure exception examples are currently not captured in a standardized format in some systems, but are able to be captured via free text. We anticipate that future iterations of vendor products will allow health care providers to collect the measure exceptions through structured fields. No modifications have been made to the measure, as the measure is currently feasible for implementation, as specified.

Bonnie information on feasibility

Bonnie test cases have been developed, based on the latest HQMF R2 release. The measure logic performs as expected in the Bonnie system.

Feasibility score cards and simulated test cases are attached, for review.
