

Anemia Management**CPM IIa: Assessment of Iron Stores**

Numerator: Adult HD or PD patients with assessment of iron stores in at least once during the 3-month study period to include serum ferritin (FERRITIN) and transferrin saturation (TSAT) or reticulocyte hemoglobin content (CHR).

Denominator: All adult (≥ 18 years old) HD or PD patients where hemoglobin (HGB) is < 11.0 g/dL (110 g/L) for at least one of the study measurement periods or if an ESA is prescribed (ESARX=1) at any of the three study measurement periods, regardless of hemoglobin.

Exclusions: Transient dialysis patients (< 30 days at this center), kidney transplant patients, acute HD. Patients not prescribed an ESA who have $HGB \geq 11$. Pediatric patients.
